

Protect your most important asset... your data

Covetrus ImproMed Data Security Solution (IDSS) is a customizable, offsite data storage service available for all ImproMed practices. Utilizing the internet and the EverSafe Backup Software, IDSS allows you to automatically transfer and then verifies the data from your ImproMed Practice Management Software to a secured server located at ImproMed.

Maintaining multiple copies of backups at separate locations greatly reduces the risk of data loss to your practice. Online data storage should be a key element in every disaster recovery plan.

IDSS provides your practice with:

- ✓ Secure off-site backup protection plan of critical data
- ✓ Data Verification
- ✓ Access to data stored by IDSS for 12 months upon request
- ✓ User defined backups – indicate the frequency and quantity of data secured
- ✓ Access to uploaded data through iCAN for 30 days following initial upload

ImproMed Data Security Solution (IDSS) is recommended and supported by Covetrus.
